

MESH GUARD

AVAILABLE FOR 5" AND 6" K-STYLE

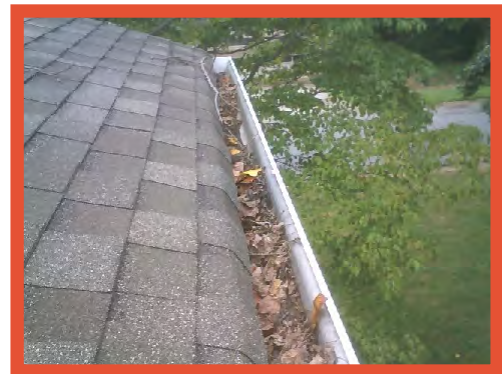

STOP CLEANING YOUR GUTTERS!

- Eliminates leaves and debris from clogging gutters
- Innovative design combines solid aluminum and stainless steel mesh for maximum strength and debris filtering
- Rain siphoning offset louvers for handling heavy water flow
- Effective against even small debris like pine needles, seed pods and shingle grit
- Works on 5" and 6" K-Style gutters
- Utilizes alignment/stiffening ribs for easy install and improved strength
- Designed to fit against fascia with no roof penetration or under shingle mounting

**Gutters With Mesh Guard
Prevents Debris Buildup**

**Gutters Without Mesh Guard
Leaves and Debris Clog Gutters**

Serving the Seamless Gutter Industry Since 1972

STRENGTHENS THE ENTIRE GUTTER SYSTEM!

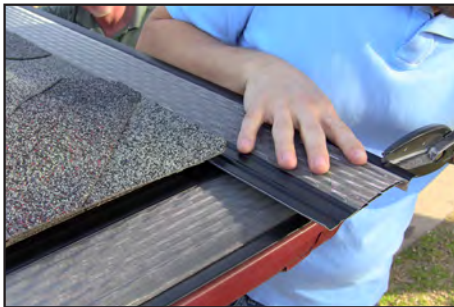

This product complies with building code 704A.1.5: Roof gutters shall be provided with the means to prevent accumulation of leaves and debris in the gutter.

REMOVE AND INSTALL FOR MAINTENANCE AS NEEDED

Clean and flush existing gutters and downspouts thoroughly with water prior to installing gutter guard.

Adjust the panel over the top of the lip of the gutter and press the rear section downward so it rests on top of the hanger screws, the panel will spring slightly and hold in place. Secure the panel to the gutter lip by installing three screws, one on each end and one in the middle.

When reaching the gutter corner, mark and cut a diagonal angle beginning from the gutter nose. Cut and remove the face of the next panel to conform to the angle and align tight together.

Gutter Guard is an integral part of a well functioning Rain Water Collection system.

KEEPS DEBRIS OUT SO SYSTEM WORKS PROPERLY

Reasons to Have a Rain Barrel at Home:

- Keeps water out of storm drains and combined sewer systems
- Controls moisture levels around the foundation of your home or property
- Provides oxygenated, un-chlorinated water to plants and flower beds
- Directs overflow to where you want it to be
- Reduces water and wastewater bills
- Conserves water in the summer months when demand is the highest
